Telephone network systems installation

The purpose of the lab is to upload the wav message from laboratory 7 into the system recording.

1- Go to system recordings located into admin menu:

The screenshot shows a web application interface for 'System Recordings'. At the top is a navigation bar with tabs: Admin, Applications, Connectivity, Reports, Settings, and User Panel. A 'Logout: admin' button is on the right. Below the navigation bar, the 'System Recordings' title is displayed. To the right of the title are two buttons: 'Add Recording' and 'Built-in Recordings'. Under the 'Add Recording' section, there is a 'Step 1: Record or upload' heading. A text prompt asks the user to enter an extension number, followed by a 'Go' button. Below this, an alternative instruction states that recordings must be PCM Encoded, 16 Bits, at 8000Hz. A file selection area includes a 'Choose File' button, a text box showing 'No file chosen', and an 'Upload' button. The next section is 'Step 2: Name', which contains a text prompt 'Name this Recording:' followed by an input field. At the bottom, a note says 'Click "SAVE" when you are satisfied with your recording' next to a 'Save' button.

1- Click on **browse** and choose the audio file that you saved earlier and then click on **upload**

2- Click on save

3- Submit changes and then click on apply config.
