Module 21

Telephone network systems installation

The purpose of the lab is to create an outbound route in PBX. An outbound route is all the external calls, as an example 9.

Go to the outbound route inside the menu connectivity, and enter a route name:

The screenshot shows a web-based configuration interface for a PBX system. At the top, there is a navigation bar with tabs: Admin, Applications, Connectivity, Reports, Settings, and User Panel. The 'Connectivity' tab is selected. Below the navigation bar, the page title is 'Add Route'. The form is divided into several sections: 'Route Settings' with fields for Route Name, Route CID, Route Password, Route Type (Emergency, Intra-Company), Music On Hold?, Time Group, and Route Position; 'Additional Settings' with Call Recording and PIN Set; 'Extension Routes' with a message 'Extension Routes is not registered'; 'Dial Patterns that will use this Route' with a field for dial patterns and a button to add more fields; 'Dial patterns wizards' with a dropdown menu; and 'Trunk Sequence for Matched Routes' with two dropdown menus for trunk selection. The interface is clean and professional, with a light blue and white color scheme.

Route Settings

Route Name:

Route CID: ☐ Override Extension

Route Password:

Route Type: ☐ Emergency ☐ Intra-Company

Music On Hold?:

Time Group:

Route Position:

Additional Settings

Call Recording:

PIN Set:

Extension Routes

Extension Routes is not registered
The free Extension Routes module is installed, but not registered.

Dial Patterns that will use this Route

+ | /

+ Add More Dial Pattern Fields

Dial patterns wizards:

Trunk Sequence for Matched Routes

0

1

Optional Destination on Congestion

In dial Patterns at the prefix type 9 and match pattern type.

In the trunk **sequence for matched routes**, choose the trunk that you created.

Submit changes and then click on apply config.
